

GitHub Requirements to All Students

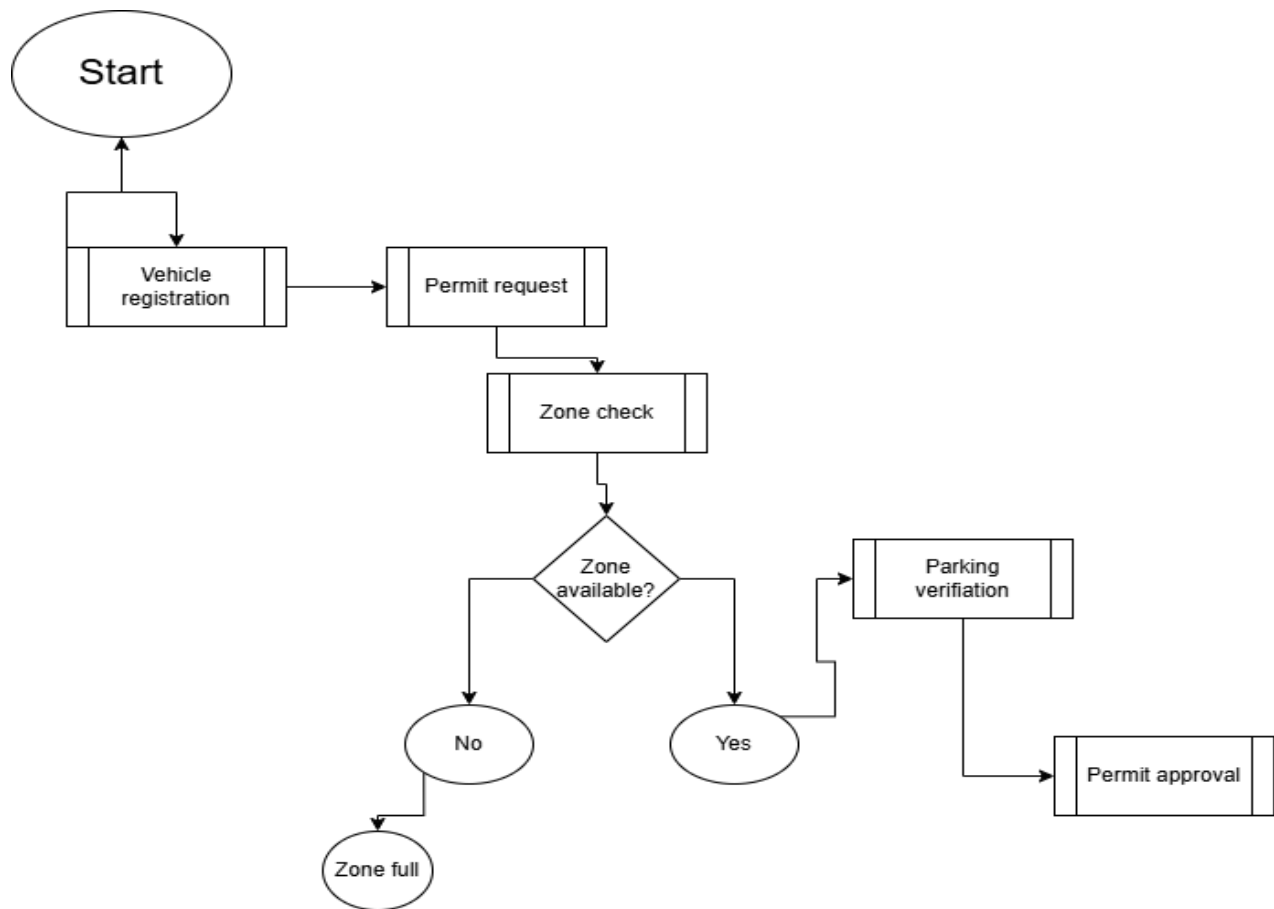

Title: *Digital Parking Permit System — Final Report*

Abdulaziz Rahmatov

https://github.com/LoTheus/SER216_Final_Project_Abdulaziz_Rahmatov/

Functional Requirements:

- The system shall allow students and staff to register their vehicle by providing a university ID, vehicle registration number, and vehicle type
- The system shall allow users to submit a parking permit request and receive an approval or rejection notification
- The system shall display available parking zones in real time, showing zone name, capacity, and current occupancy
- Security staff shall be able to verify a vehicle's permit by entering the permit ID and record any parking violations
- **Non-Functional Requirements:**
- The system shall return any permit verification result within 3 seconds under normal network conditions
- All parking permit data and violation records shall be securely stored with role-based access so only authorized staff can modify records

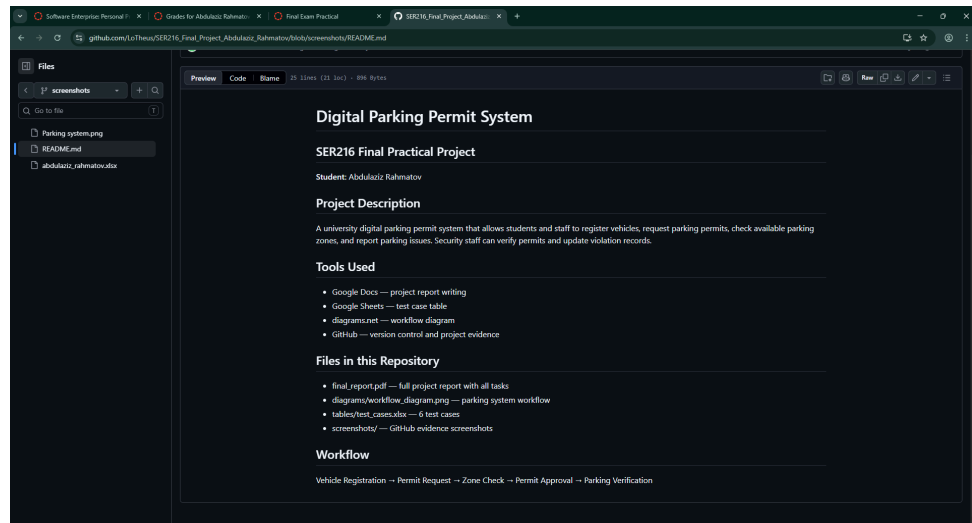

Task 4 — Defect Analysis

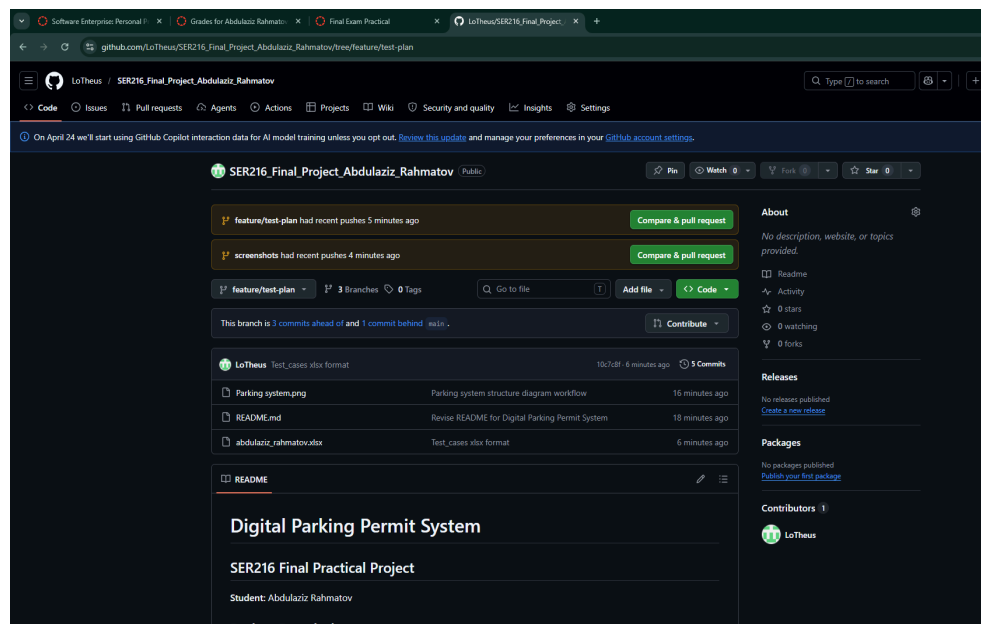

Defect: "A valid parking permit is shown as expired during security verification."

Item	Answer
Defect category	Functional defect
Severity	High
Priority	High
Possible root cause	The expiry date comparison logic uses an incorrect date format or wrong timezone, causing valid dates to appear as expired
Regression test	Enter a valid permit with a current expiry date and verify the system correctly displays it as valid during security verification
